Recorded fingerprint windows cover 4:19.947 of the 4:19.947 source file. Overlapping windows are counted once. The detailed time ranges and results appear in the window ledger.

WHAT THIS RESULT MEANS

At least one submitted audio window matched a commercially released recording in the recognition database. Review the identified recording details and time alignment before distributing or monetizing the upload.

WHAT TO DO NEXT

1. Use the time markers in this report to find the matched audio in your track.
2. Confirm that the material is licensed or authorized. Edit, replace, or clear anything unresolved.
3. Screen the revised version and keep both reports as a record of what changed.

SAVE IT. SHARE IT. COME BACK TO IT.

Download and keep this PDF with your track records. Every scan gets its own ID, like a receipt number. The link below opens the same result online, so you can send it to a label, distributor, client, collaborator, or anyone else who needs to see what was checked - without sending your audio.

SAMPLE PREVIEW - SHORTENED FOR QUICK REVIEW

This preview stops after 2 example windows. Your actual report continues in the same format for all 26 windows checked, from the first second of the track to the last. No windows are removed from a real customer report.

Methodology and audit integrity

Technical details retained with the screening record for reproducibility and third-party review.

SCREENING METHOD

The source audio was decoded and divided into recorded fingerprint windows. Each window was converted to mono PCM audio, hashed with SHA-256, and submitted to ACRCLOUD acoustic recognition. The engine response for every window was retained in the signed audit record. The aggregate result is MATCH DETECTED when any recorded window identifies a commercial recording; otherwise it reflects the definitive no-match, non-fingerprintable, or error responses recorded in the ledger.

The database is dynamic and recognition is probabilistic. A no-match result is a point-in-time screening outcome. It does not determine ownership, public-domain status, composition rights, lyric rights, sample permissions, licenses, or how another platform may evaluate the audio.
